

Marlene H. Dortch, Secretary
Federal Communications Commission
445 12th Street, SW
Washington, DC 20554

Dec 21, 2012

Subject : WT Docket No. 11-49

Dear Secretary Dortch & Commission

Our Company, InvisiMax Inc. , is a Wireless Internet Service Provider. Located in Warren MN, operating in NW Minnesota & NE North Dakota. We service about 38 small rural communities and have a customer base of over 2,000 accounts. Provide service access to over 10,000 computers or users. Today we use all unlicensed frequencies for the last mile connection to our customers. Today we only use 900 MHz in two locations. The reason we do is they do NOT have any other option. The 900 MHz will penetrate the trees and obstructions that we are fight in their area. We use both Motorola Canopy and Ubiquiti equipment. Although we are not serving the majority of our customers on the 900 MHz, it is extremely important to those we are.

I have read and am familiar with the joint test report that WISPA and Progeny prepared and submitted to the FCC. To us it is clear there is reduction and interference with both brands of equipment that we use and plan to expand our use. We (using 900 MHz) are an important part to serving specific customers in this frequency and Progeny would clearly hurt us and our customers.

We have worked with many other operators in these frequencies and we co- exist. The Pending network and equipment of Progeny's, shows unacceptable levels of interference and unaccepted interference. In which is the standard that the FCC should and I assume will use to decide that the Progeny license will have a negative affect, to way too many people and businesses. This would cause a clear disruption in our business, our customers businesses, the families that are connected in which they use their connections for education, health information, banking along with entertainment. The Progeny license in our area will reduce throughput (everyone needs more, not less) it will reduce reliability, we will lose the number of channels we can use, affecting customer performance. This will clearly cause the American consumer and us an American local business, HARM.

In closing I urge you to DENY APPROVAL, for Progeny to operate its licensed network inside the 902-928 MHz band.

Sincerely and respectfully

David Giles, Pres
InvisiMax Inc.
